

Bloomberg country codes

Bloombergs makes use of a (relatively) standardised naming convention for all security ticker codes, which normally include a 2 character country code as well.

The naming convention is as follows :

Share code	+	country code	+	security type
BHP		LN		EQUITY

For example : BHP LN EQUITY

(Bloomberg normally separates the the three identifiers with a blank between each.)

Risk101 automatically supports the Bloomberg naming convention for all the countries listed below.

The country codes are as follows :
